DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1, 5, 9, 13, 17, 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The limitation “ the query and/or the data” on line 12 and 14 is vague and indefinite because it does not set the metes and bounds of the claim. For examination purpose , the examiner will interpret the limitation” the query and/or the data” as “the query or the data”.

Claims 2-4, 6-8, 10-12, 14-16 and 20-22 incorporate the problems of independent claims 1, 9, 17 and 19 be dependency.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Art Unit: 2654

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1- 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Ortega et al (6,144,958).

As per claim 1, Ortega et al teach a search apparatus for searching for data in the form of units of a natural language, (figure 4)the apparatus comprising:

“Interface means for receiving an input query in the form of a natural language and for outputting ...) (his process search query received from user);

“Matching means for searching for and identifying any matches between the input ...) (Col. 8, lines 27-32);

Art Unit: 2654

“Generating means for where there are unmatched units in the query or the data, generating context data in the form of one or more unmatched units of the query...having a predefined linguistic relationship to one of the or each matched units) (col. 8, lines 39-63, the query server invokes its spelling correction to attempt to correct the non-matching terms . The term correction process by retrieving the related term list for each matching term from the correlation table.(Reads on predefined linguistic relationship).

As per claims 2-5, Ortega et al teaches wherein said generating means is adapted to generate the ...modification relationship to the respective matches units (col. 8, lines 12-63, the spell correlation retrieves the related terms list for each matching term from the correlation table).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 6 and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ortega et al (6,144,958).

It is noted that Ortega et al teach the claimed invention but does not explicitly teach forming means is adapted to form ...said matched units associated with respective said unmatched units having predefined linguistic relationship to respective matched units. However, Ortega et al

Art Unit: 2654

teach at col. 8, lines 27-38, "appalatian" does not exist as a subject word in the bibliographic database 40. Therefore, one having ordinary skill in the art at the time the invention was made would recognize that the non-matching units have linguistic relationship with the matching units such subject/verb/object with the motivation of notifying to the user why certain units were unmatched since it would allow the user to make modifications to the query that would increase the likelihood that the query result will contain items that are of interest to the user.

It is noted that Ortega et al teach the claimed invention but does not explicitly teach wherein said forming means is adapted to form output data as a layered hierarchical structure identifying sets of data by their context data. However, this feature is well known in the art. Therefore, one having ordinary skill in the art at the time the invention was made would have found it obvious to output the data as taught by Ortega as a hierarchical structure because it would allow a user to efficiently and intuitively identify a document (i.e. topic) as being a subtopic of a superior topic.

8. Claims 9-22 are the same in scope and content as claims 1-9 above and therefore are rejected under the same rationale.
